

orthofinder 2921- expansin-like

top hit is Spinach with 55% identity, top hits are all beet family sequences

**Fig. S13. A phylogenetic tree of an expansin-like gene supporting HGT from a Caryophyllales donor in OrthoFinder group 2921.** Different angiosperm lineages are coloured according to the colour code system in Fig. 2d. *Cuscuta* parasites are highlighted with yellow background, Orobanchaceae parasites are highlighted with a gray background. The HGT node is coloured with green lines. The line graph shows the expression of the HGT gene.
